I don't know why the file turns out like this.

description of what I have done:

Since I entered the group lately, everybody had done many things already. The code was almost done. The left part was Unit Test. Well, I took this part. One of the biggest problem was to understand the code. Unit Test is a white box testing. Tester is required to understand the code well. However, because I entered the group after the code was almost done, I had to try to figure out what each and every piece of codes was about. I spent a lot of time on this and the problem was the code description is in French. I did not event know the details of the database, its data structure, and especially how to use the code.
However, with the help from Iliasse as well as Paraita, things was becoming better and better. I started to write the implementation of the test classes and test on the local database.
